Dear Hiring Manager,

I am writing to express my strong interest in the Engineering Summer Analyst Program 2026 at Goldman Sachs in Stockholm. As a Software Engineer, I am eager to contribute my technical expertise and problem-solving mindset to a team that is redefining what's possible in technology and finance.

During my internship as a Backend Developer at Helder Technologies, I led the backend development of several projects using Node.js and Laravel, designing secure and efficient RESTful APIs. This experience enhanced my ability to approach challenges with both creativity and precision—skills that align perfectly with Goldman Sachs' mission to engineer scalable, high-impact systems.

In addition, as a Machine Learning Intern at DevTech, I developed and deployed machine learning models that improved prediction accuracy by 20%, gaining hands-on experience in leveraging data-driven insights to optimize performance and efficiency. These projects deepened my understanding of how big data and AI can be applied to solve complex, real-world problems, particularly in fast-paced and data-intensive environments like finance and trading.

What excites me most about Goldman Sachs Stockholm is the firm's dedication to engineering excellence and innovation across global markets. I admire how your teams build massively scalable software, architect low-latency infrastructure solutions, and leverage machine learning alongside financial engineering to continuously turn data into action. I am particularly eager to contribute to projects that merge software engineering with data analytics, helping drive smarter, faster decisions that power Goldman Sachs' global operations.

I would be honored to join a team that thrives on collaboration, creativity, and continuous learning. My technical foundation, combined with my passion for building impactful software, makes me a strong fit for the Engineering Division at Goldman Sachs. I look forward to the opportunity to contribute to your mission of pushing the limits of digital possibilities and transforming finance through innovation.
